

ORIGAMI

by Corby Anderson

Here's AI's attempt at an origami puzzle. I said to make it space-themed, and it sure looks like it tried pretty hard. See what you can make of it.

Don't be _____

First cut on solid lines. Fold each piece 6 times, only on dotted lines, such that 1) the dotted line remains visible, and 2) each fold completes a colored box *in order* (hold piece up to a light to see the complete box), 3) the last completed box is fully visible. Combine the four parts by ensuring everything is **PUT in PLACE** correctly. And finally, identify each mixed-up star's hitchhiker.
